The TELETERM C2361C Remote Terminal Unit (RTU) is designed for remote data acquisition over Ethernet backbones in large campus environments. Using M2e analogue and digital field instruments as well as water, electricity and gas meters can be monitored.

The inputs accommodate common analogue and digital sources, including pulse. Configuration of I/O as digital outputs is also possible. Two 4-20mA analogue outputs are provided. For detailed operation consult User Manual and Data Sheet.

### **FEATURES**

- 12 Discrete inputs/outputs plus 2 serial ports
- 9-30V dc powered
- 10/100 Ethernet port

- . Micro SD card for off-line data logging
- Integral Real-Time Clock with battery backup
- Wide operating temperature range

# **CONFIGURATION**

Configuration is performed using the OMNISET Software Configuration Utility running on a Windows PC, using the programming socket in the front of the module. Use C2361C Template, and Programming Cable to set the all configuration parameters.

See Help in software Template for more detailed procedure.
