16 way Relay Output Board

## FEATURES

- 16 potential-free relay contact outputs
- Standard Omniflex ribbon connection
- Din-Rail Mounting
- Compact Size

The C6325A Relay Output board is a terminal board designed for relay outputs into the field wiring from standard Omniflex Ribbon output for maximum density and convenience. The normally open relay contact
circuits are isolated and are typically used with potential free contact inputs. Terminals for the connection of DC power are provided .

The C6325A board is fitted onto a quick mount plastic rail for DIN-rail mounting in control panels.
